Remark 1)The max working temperature is only for reference, is depended on the circuit the magnet is operating in.

2)Customers are recommended to consult us on application involving temperature near to max working temperature.

3)When $B/\mu \cdot H=1$, The magnet is operated at mentioned max working temperature, The irreversible losses less than 5% is guaranteed.

4)Max. value is only for reference

Remark

1)The max working temperature is only for reference, is depended on the circuit the magnet is operating in.

2)Customers are recommended to consult us on application involving temperature near to max working temperature.

3)When $B/\mu \cdot H=1$, The magnet is operated at mentioned max working temperature, The irreversible losses less than 5% is guaranteed.

4)**S, means corrosion stable material + thermal stable material (weight loss after 7 days PCT less than 5mg/cm2 and with required Hcj vale at high temperature)

5)Max. value is only for reference

☆ Physical Properties

Temp. Coeff. Of Br.	-0.11%/°C	Temp. Coeff. Of Hc:	-0.60%/°C
Density	7.3-7.5g/cm ³	Electrical Resistivity:	114μΩ.cm
Vickers Hardness:	600Hv	Flexural Strength:	25kg/mm
Tensile Strength:	8.0kg/mm ²	Coeff. Of Thermal Expansion:	4x10-6°C
Specific Heat	0.12kCal/(kg, °C)	Thermal Conductivity:	7.7kcal/(m.h.°C)
Young's. Modulus:	1.6x10(11)N/m ²	Rigidity:	0.64N/m ²
Poisson's.Ratio	0.24	Compressibility	9.8x10-12m ² /N
Curie Temperature:	310-340°C		

☆ Types of Coatings

The coatings can be divided into two basic groups: metallic and organic. To meet special requirements and on request, double coatings of metal/metal, metal/varnish and number of special coatings are available.

* Metallic coatings

Usually, galvanic processes are used for metallic coating. We have
...Zinc coatings (blue passivated or yellow passivated)
...Nickel + Nickel coating
...Nickel + Tin coating
...Nickel + Copper + Nickel coating (available starting from June,1988)

* Organic coatings

...Nickel + Epoxy coating
...Epoxy coating
Temporary corrosion protection / Surface Passivation

To protect uncoated magnets temporarily, e.g., during transport or storage, Passivation can be made. This protects NdFeB magnets sufficiently against temporary environmental influences, such as a rise in humidity. With this special treatment, magnets can be stored under normal ambient conditions.

Passivated magnets is not suitable to be installed into system without further treatment.

☆ Production Process
